

SYSTEM AND METHOD FOR FRAME STORAGE OF EXECUTABLE CODE

Abstract of the Disclosure

5 A system and method for client/server communications,
the method including the steps of loading to a client
browser a frame set including a function frame and a content
frame; loading application code to the function frame; and
responsive to user interaction with the content frame,
10 executing the application code. The frame set may also
include navigation frame and a data accumulation frame. By
using the frame set to store executable application code,
collect and store data, and interact with a user, an
application may be executed at a client browser
15 substantially without client/server interaction beyond
initializing the frames and communicating the end results.
